

ATOM™ miniature encoder system

ATOM™ is the world's first miniature encoder with filtering optics, providing improvements in dirt immunity, signal stability and reliability for linear, partial arc and rotary applications.

ATOM features a number of other advances that help maintain signal stability, including integral Auto Gain Control and Auto Offset Control, along with a highly reliable IRED light source, making the product suitable for use in applications demanding quality and dependability.

The miniature readhead is available in 2 formats: hi-flex cable output or flexible-printed circuit (FPC) output. The FPC version helps reduce overall package size, with a reduced Z-height and easy cable routing.

ATOM is available with a range of high-accuracy optical linear, partial arc and rotary scales, including conventional glass spars, 'unbreakable' stainless steel tape scales and glass discs. Installation has been simplified by an intuitive set-up LED on the readhead that indicates signal level. Optical reference mark phasing and incremental signal optimisation can be achieved with the simple press of a button.

ATOM is suitable for use in a variety of applications that require compact size, including laser scanners, CMM arms, semiconductor manufacturing, compact linear motors/motion stages, small DDR torque motors, galvanometers and microscope stages.

ATOM – miniaturisation without compromise.

- Miniature package: 8.35 mm × 12.7 mm × 20.5 mm (7.3 mm × 12.7 mm × 20.5 mm for FPC version)
- Highest signal stability and dirt immunity in its class due to filtering optics
- Long-term stability provided by integral Auto Gain Control (AGC) and Auto Offset Control (AOC)
- Low sub-divisional error (SDE) and jitter
- Easy installation and diagnostics using the set-up LED on the readhead
- Fast, simple calibration at the push of a button
- Auto-phase optical reference mark
- Available in 20 µm and 40 µm scale pitch versions
- Analogue output direct from the readhead
- Multiple interpolation options, with resolutions to 1 nm
- Range of high accuracy rotary, partial arc and linear scales

System features

High performance

- **Need higher speed?**

ATOM is the fastest encoder in its class, with maximum speeds up to 20 m/s and a range of high-speed interpolation options for digital versions.

- **Need higher accuracy?**

ATOM offers linear tape scales with specified overall accuracy to $\pm 5 \mu\text{m}/\text{m}$ at 20 °C, without the need for 2-point compensation that competitor encoders require.

- **Need improved positional stability and repeatability?**

ATOM has low noise (jitter), allowing users to increase servo-loop gain without instability, whilst reaping other dynamic performance benefits such as faster settling times and higher acceleration.

- **Need smoother velocity control?**

Reduce velocity ripple, improve scanning performance, reduce blur on vision systems and image capturing – all thanks to ATOM's superior optical scheme and integral AOC.

Lissajous stability

ATOM features a miniaturized version of Renishaw's unique filtering optics that are used in the TONiC™ encoder range. This optical scheme is tuned to a specific spatial frequency, so it rejects other harmonics, including those caused by dirt or other contaminants. The result is a Lissajous with high purity, that retains its fidelity even when the scale is exposed to contamination: ideal for applications where reliability is critical.

Product range

- **20 µm and 40 µm readheads with high-flex cable:**

For general purpose applications. Superior quality cable tested to 20 million flex cycles.

- **20 µm and 40 µm readheads with FPC cable:**

Side exit FPC cable allows the smallest overall package size.

- **Stainless steel tape scale (RRLF):**

Linear scale that can be wrapped around drums, arcs or shafts with radii down to 26 mm.

- **Stainless steel tape scale (RTLF):**

High-accuracy linear scale with graduations directly marked onto the steel tape surface. Available on reels for cut-to-suit flexibility.

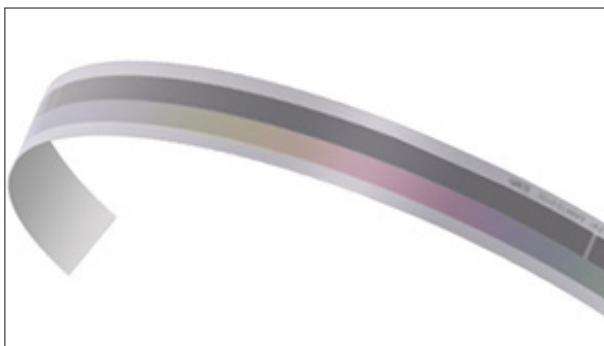

- **Glass linear spars (RCLC):**

Conventional glass spars, available in lengths up to 130 mm.

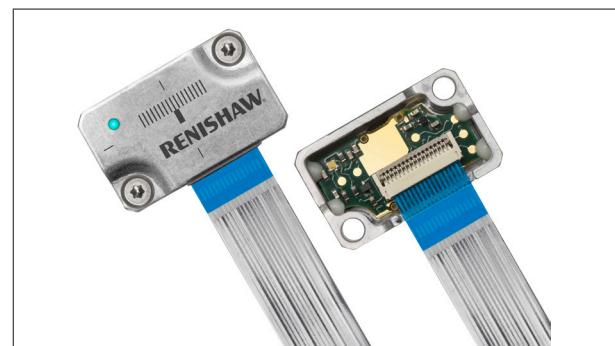

- **Glass discs (RCDM):**

High-accuracy rotary scales with outer diameters down to 17 mm.

Stainless steel tape scale (RRLF)

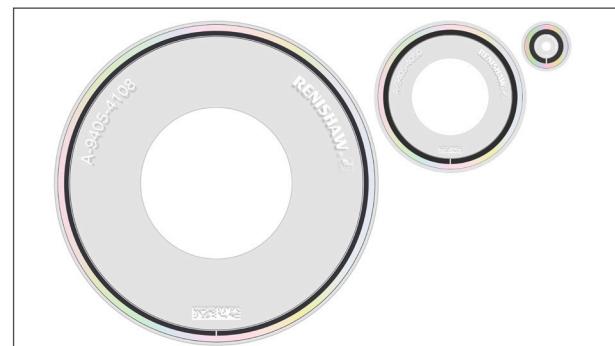

20 µm and 40 µm readheads with FPC cable

ATOM interface options

ATOM readheads are available in three versions all giving industry standard analogue output:

- High flex cable terminated with a 15-way D-type connector for high-volume users requiring analogue outputs.

NOTE: A CAL button is not included on this option. Refer to the installation guide for details on how to calibrate.

- High-flex cable terminated with a T-type interboard connector for use with ACi/Ri/Ti interfaces.
- FPC connector for use with ACi interface or direct connection to user electronics.

ACi interfaces are a range of high performance, miniature, open interpolator subsystems. They bring unparalleled price-performance benefits to today's motion systems that need fine resolution coupled to high speed performance in an ultra compact, open format, small footprint solution and have provision for calibrating the system. Digital interpolation down to 10 nm at up to 40 MHz clocked output is available. FPC or cable input versions available.

Ri interfaces are contained within an industry standard 15-way D-type connector shell, including CAL button. They offer digital interpolation down to 50 nm (clocked) and 0.5 µm (non-clocked). Analogue variants are also available.

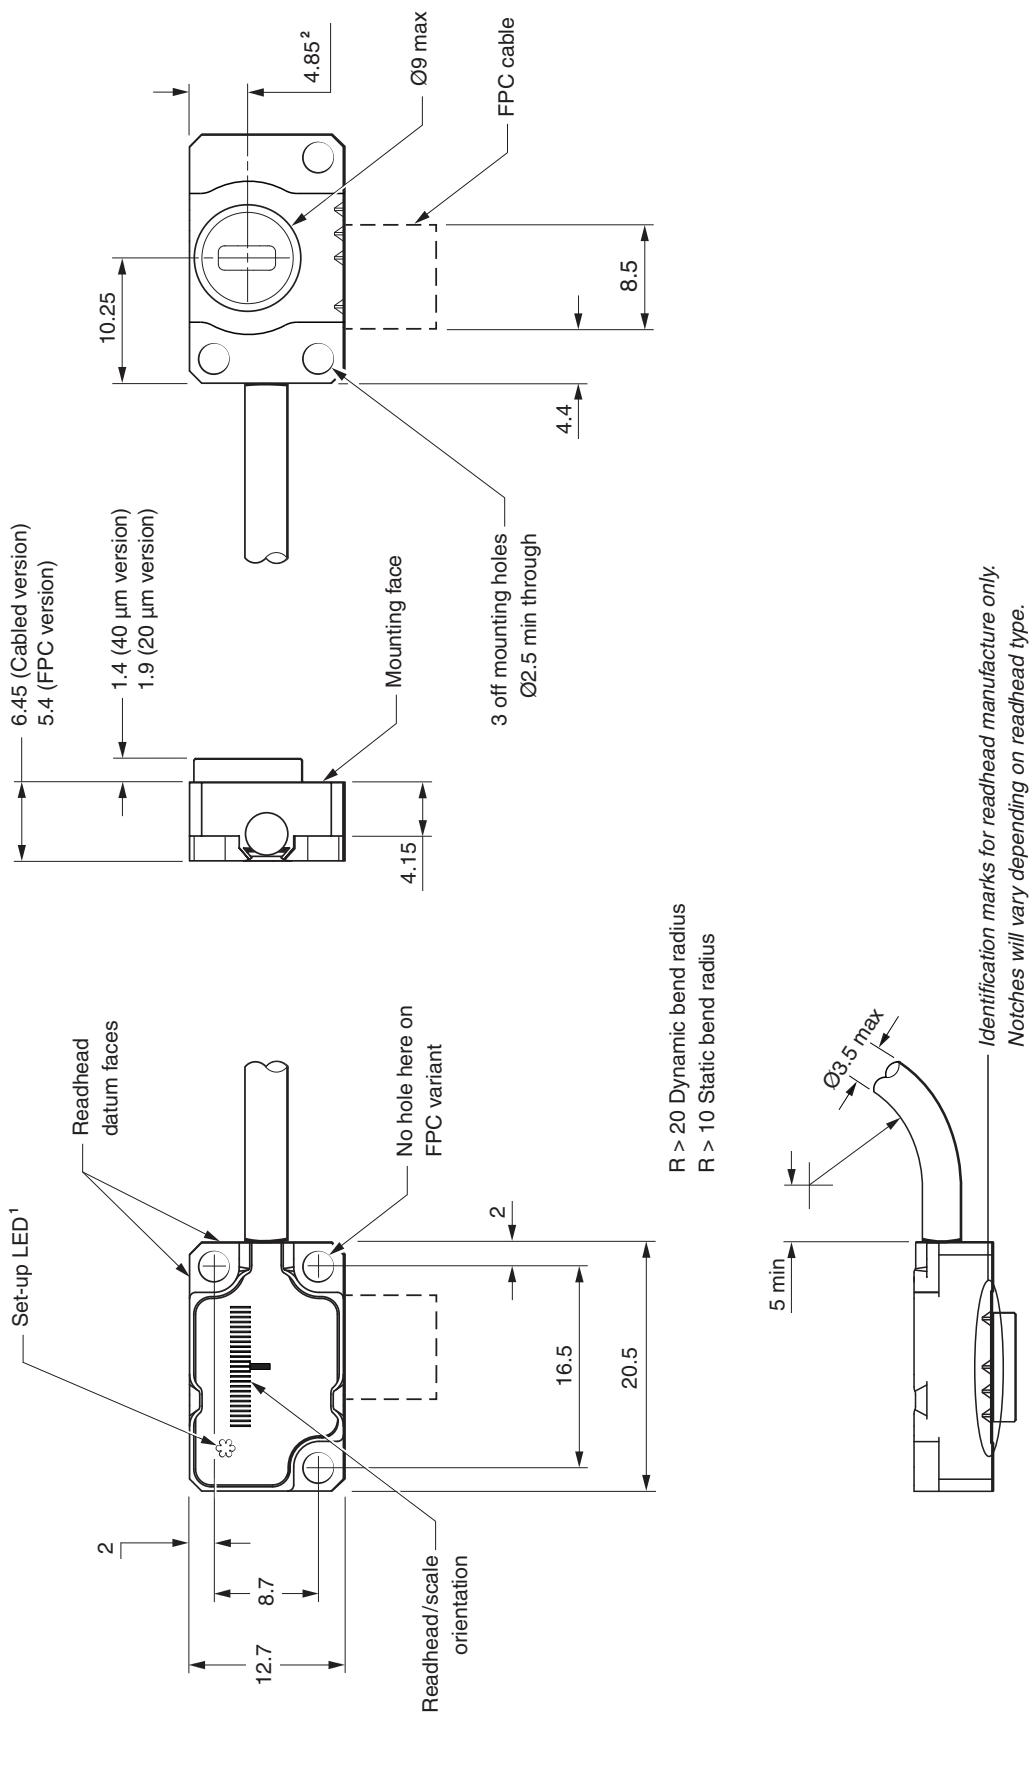

Ti interfaces are designed for applications that require higher speed, lower SDE, digital interpolation down to 1 nm resolution and include a CAL button. Clocked outputs have been optimised for speed and performance at all resolutions for industry-standard controllers. Analogue variants are also available.

ATOM readhead dimensions

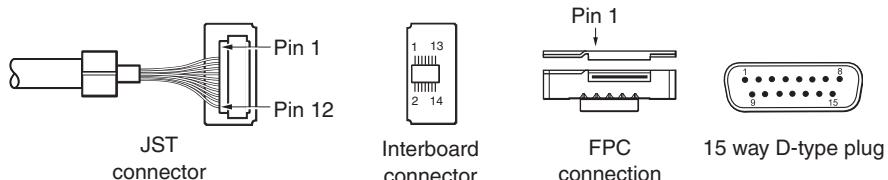

Dimensions and tolerances in mm

- ¹ On FPC variants the set-up LED cut-out is circular.
² Not optical centreline.

Readhead output signals

			JST ² (on interboard)	Interboard connector (T)	FPC (F)	15-way D-type (D)

Maximum speed

40 µm readhead - 20 m/s (-3dB)

20 µm readhead - 10 m/s (-3dB)

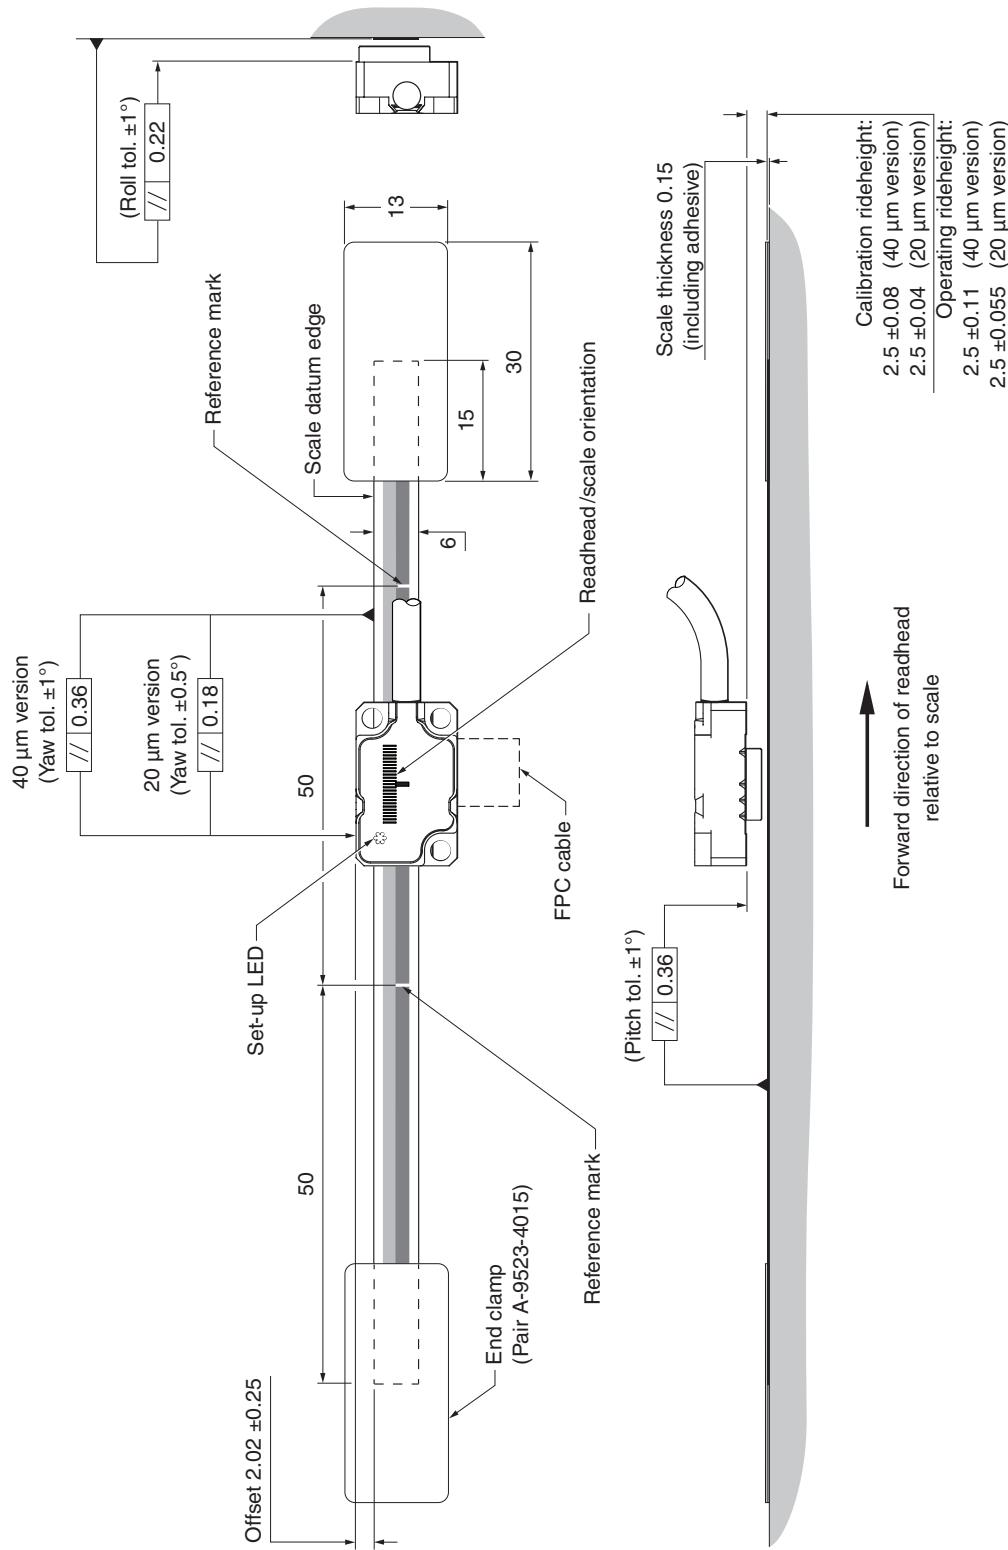

¹ All power connections can be used either to minimise voltage drop down the cable or incorporate voltage sensing.

² Only available on interboard connector.

RKLF tape scale installation drawing

Dimensions and tolerances in mm

For detailed installation drawings refer to www.renishaw.com/atomdownloads.

For further information on the use of RKLF scale for partial arc applications refer to the RKLF partial arc scale data sheet (Renishaw part no. L-9517-9897).

RKLF technical specifications

Material	Hardened and tempered martensitic stainless steel fitted with a self-adhesive backing tape
Form (H × W)	0.15 mm × 6 mm (including adhesive)
Scale pitch	20 µm and 40 µm ¹
Reference mark	Auto-phase optical reference mark repeatable to unit of resolution throughout specified speed and temperature range. Customer de-selectable reference marks at 50 mm spacing. ² Reference mark in the centre of scale for lengths < 100 mm.
Accuracy (at 20 °C)	RKLF20-S / RKLF40H-S RKLF40-S
	±5 µm/m ±15 µm/m
Linearity (at 20 °C)	RKLF20-S / RKLF40H-S RKLF40-S
	±2.5 µm/m achievable with two point error correction ±3 µm/m achievable with two point error correction
Installation temperature	+10 °C to +35 °C ³
Coefficient of thermal expansion (at 20 °C)	Matches that of substrate material when scale ends fixed by epoxy mounted end clamp.
Length	20 mm to 1 m in 10 mm increments 1 m to 10 m in 1 m increments ⁴ Overall length = measuring length + 70 mm Scale length = measuring length + 40 mm
Mass	4.6 g/m
End fixing	Epoxy mounted end clamps (A-9523-4015) Approved epoxy adhesive (A-9531-0342) Scale end movement typically < 1 µm ⁵

¹ 20 µm not suitable for partial arc applications.

² Only selected reference mark is bi-directionally repeatable.

³ Ensure that the scale and end clamps are installed following the installation process described in the ATOM™ linear encoder system installation guide (Renishaw part no. M-9696-9723).

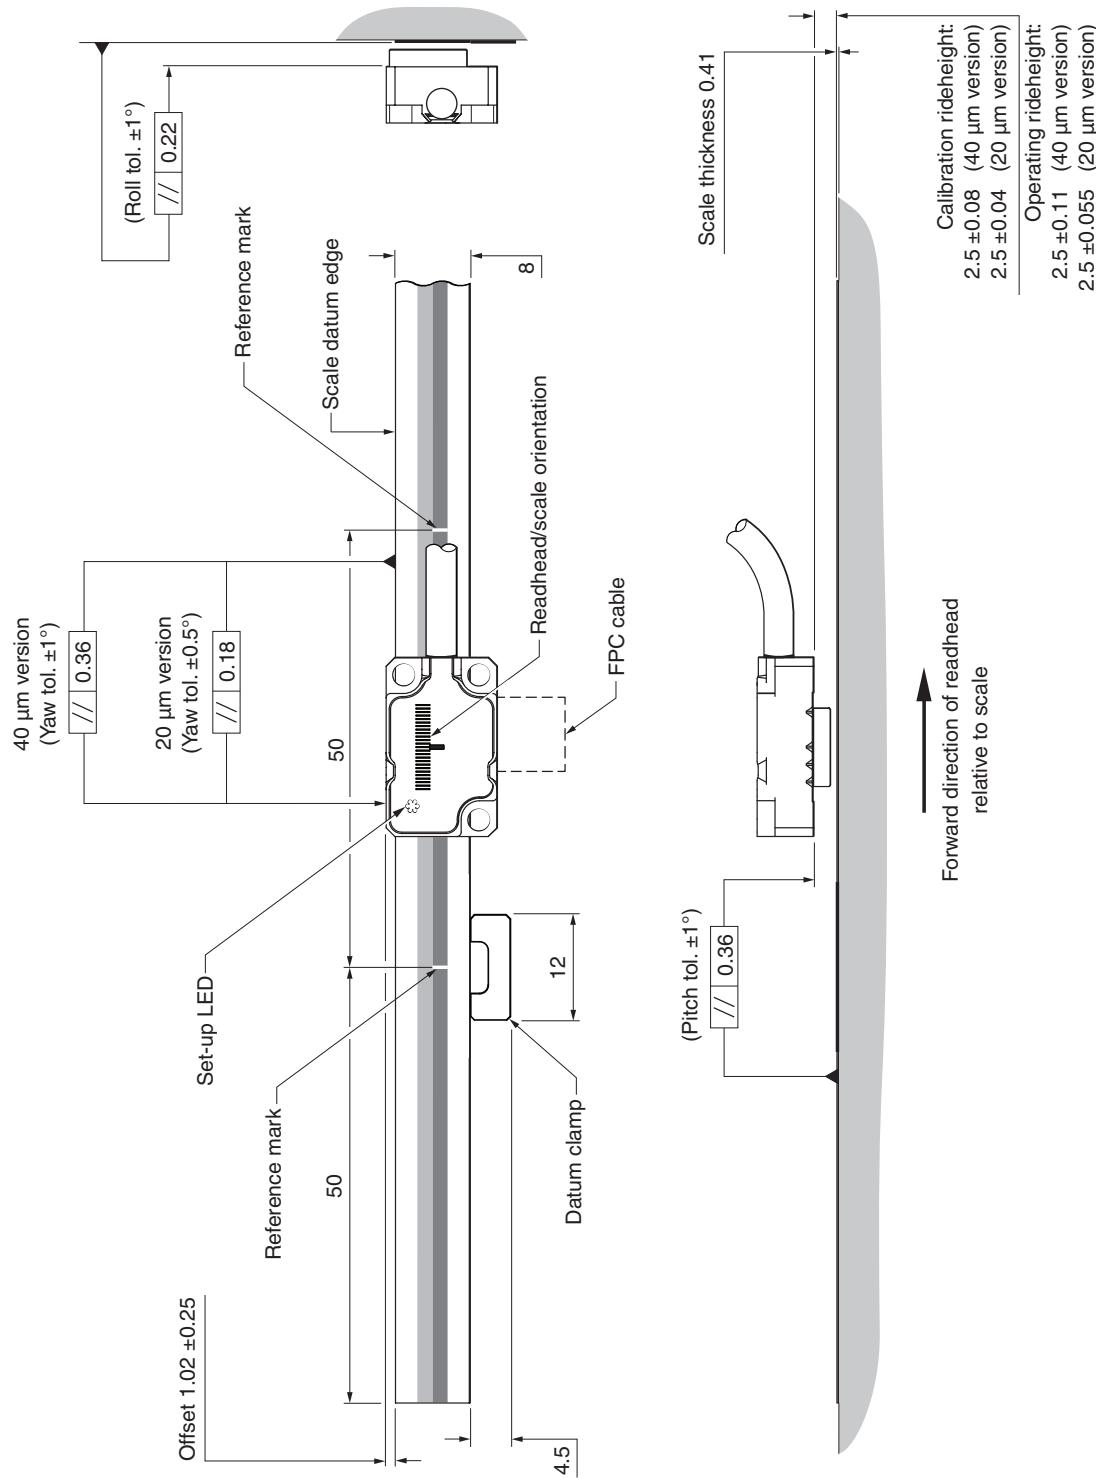

⁴ Maximum recommended axis length 1 m for 20 µm systems.

⁵ To limit maximum tension in the scale ($\text{CTE}_{\text{substrate}} - \text{CTE}_{\text{scale}}$) \times ($T_{\text{use extreme}} - T_{\text{install}}$) $\leq 550 \mu\text{m/m}$ where $\text{CTE}_{\text{scale}} = \sim 10.1 \mu\text{m/m}^{\circ}\text{C}$.

RTLF tape scale installation drawing

Dimensions and tolerances in mm

For detailed installation drawings refer to www.renishaw.com/atomdownloads.

RTLF technical specifications

Material	Hardened and tempered martensitic stainless steel fitted with a self-adhesive backing tape
Form (H × W)	0.41 mm × 8 mm (including adhesive)
Scale pitch	20 µm and 40 µm
Datum fixing	Adhesive datum clamp A-9585-0028 secured with Loctite® 435
Reference mark	Auto-phase optical reference mark repeatable to unit of resolution throughout specified speed and temperature range. Customer deselectable reference marks at 50 mm spacing. ¹ Reference mark in the centre of scale for lengths < 100 mm.
Accuracy (at 20 °C) RTLF20-S / RTLF40H-S RTLF40-S	±5 µm/m ±15 µm/m
Coefficient of thermal expansion (at 20 °C)	10.1 ±0.2 µm/m/°C ²
Length	20 mm to 1 m in 10 mm increments 1 m to 10 m in 1 m increments ³ Scale length = measuring length + 6 mm (without optional end covers)
Mass	12.2 g/m

¹ Only selected reference mark is bi-directionally repeatable.

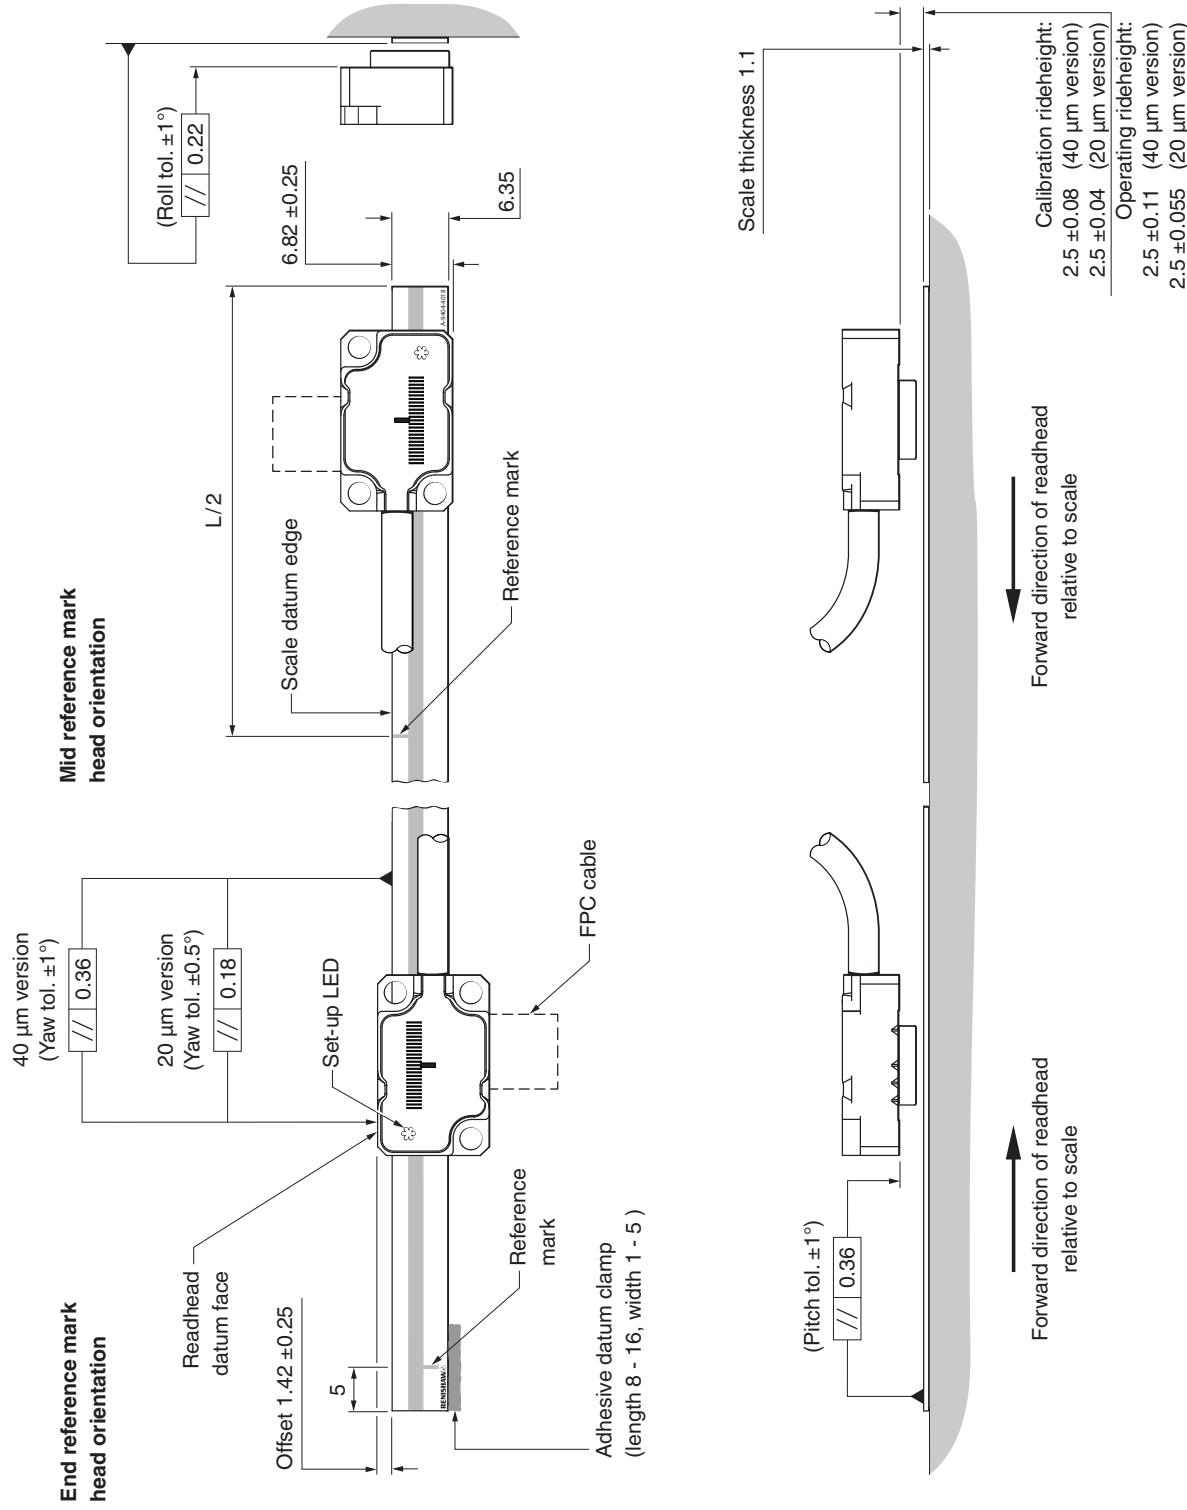

² Substrate coefficient of thermal expansion does not need to match that of the scale.

³ Maximum recommended axis length 1 m for 20 µm systems.

RCLC glass spar installation drawing

Dimensions and tolerances in mm

For detailed installation drawings refer to www.renishaw.com/atom/downloads.

RCLC technical specifications

Material	Soda-lime glass spar fitted with a self-adhesive backing tape
Form (H × W)	1.1 mm × 6.35 mm (including adhesive)
Scale pitch	20 µm and 40 µm
Datum fixing	Fillet of adhesive (A-9531-0342) on one side of the scale
Reference mark	Auto-phase optical reference mark repeatable to unit of resolution throughout specified speed and temperature range. Either mid or one end of travel, determined by orientation of the readhead.
Accuracy (at 20 °C)	±3 µm
Coefficient of thermal expansion	~8 µm/m/°C
Mass	13.9 g/m

Acceleration (system)	Operating	400 m/s ² , 3 axes
Shock (system)	Operating	1000 m/s ² , 6 ms, ½ sine, 3 axes
Vibration	Operating	100 m/s ² max @ 55 Hz to 2000 Hz, 3 axes
Mass	Cable readhead	4 g
	FPC readhead	2.3 g
	Cable	18 g/m
	Ti interface	100 g
	Ri interface	70 g
	ACi interface	4 g
Readhead cable		10 core, high flex, EMI screened cable, outside diameter 3.5 mm maximum Flex life > 20 × 10 ⁶ cycles at 20 mm bend radius, maximum length 5 m. (Extension cable up to 25 m when using Renishaw approved extension cable) UL recognised component 
FPC cable		16 core, 0.5 mm pitch, maximum exposed conductor length 2.5 mm, maximum length 1 m
Connector options	Cable variants	Interboard connector compatible with the Ri, Ti and ACi (cable variant) interfaces 15-way, D-type connector
	FPC	16 core, 0.5 mm pitch, compatible with ACi (FPC variant)
Typical SDE (analogue)	20 µm version	< ±75 nm
	40 µm version	< ±120 nm

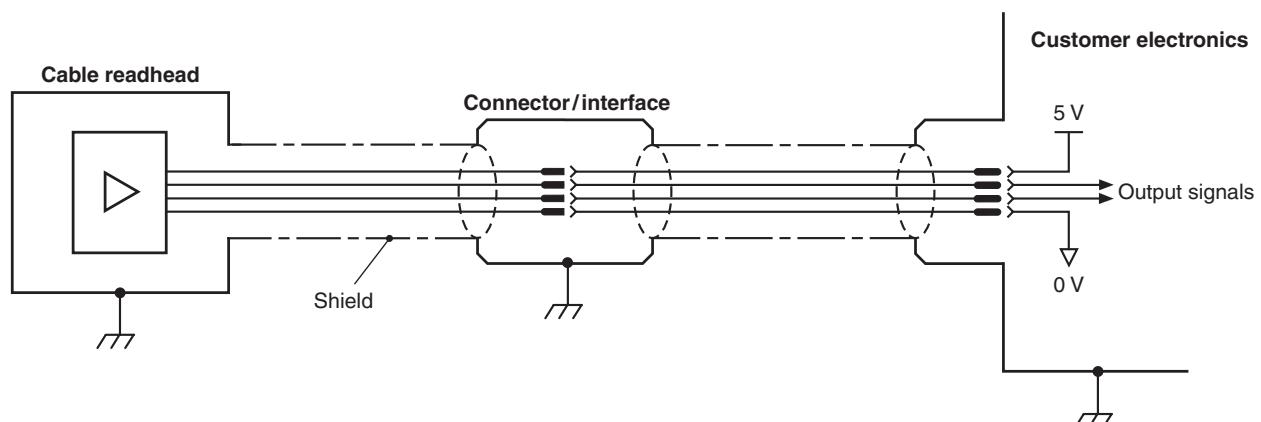

¹ Current consumption figures refer to unterminated systems.

Electrical connections

Grounding and shielding

For more information on FPC refer to the installation guide.

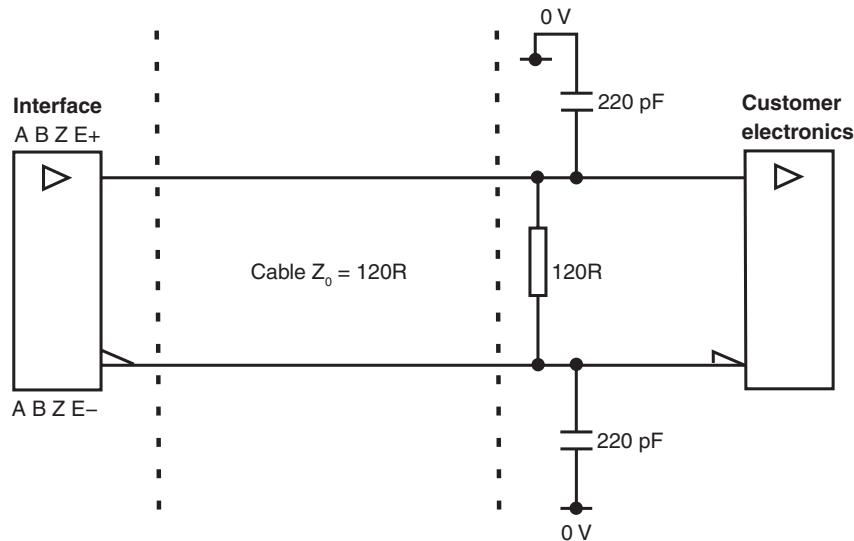

IMPORTANT: The shield should be connected to the machine earth (Field Ground).

NOTE: Maximum cable length between interface and customer electronics is 25 m for ACi and Ri and 50 m for Ti depending on clocked output.

Recommended signal termination

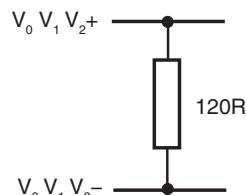

Digital outputs

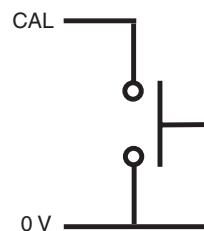

Standard RS422A line receiver circuitry.

Capacitors recommended for improved noise immunity.

Analogue outputs

Remote CAL operation

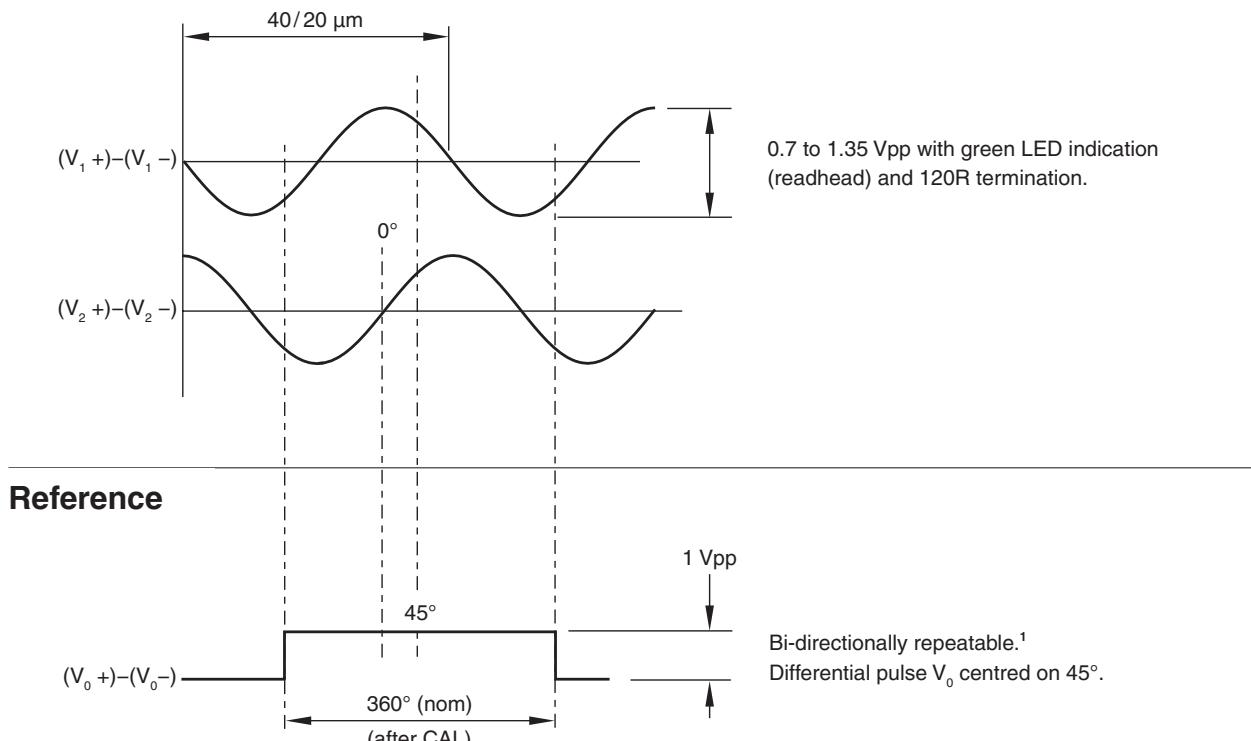

Remote operation of the CAL is possible via the CAL pin. For applications where no interface is used, remote CAL operation is essential.

Output specifications

Analogue output signals

All ATOM readheads and Ri and Ti analogue interfaces

Incremental 2 channels V_1 and V_2 differential sinusoids in quadrature, centred ~ 1.65 V (90° phase shifted)

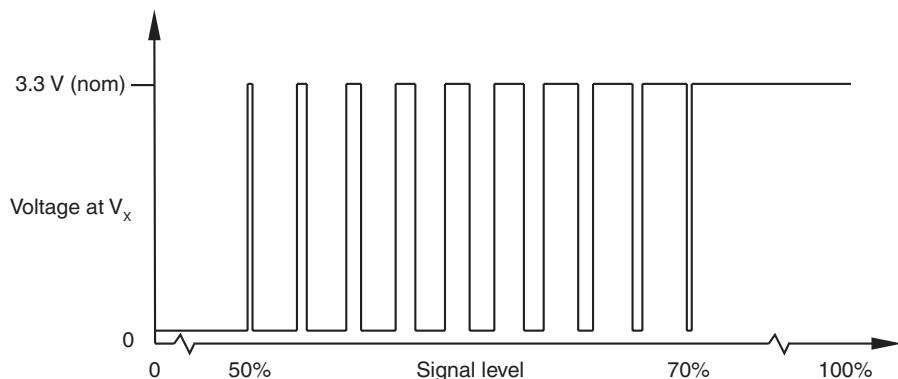

Differential signals V_0+ and V_0- centred on ~ 1.65 V.

¹ Only calibrated reference mark is bi-directionally repeatable.

Set-up

During normal operation

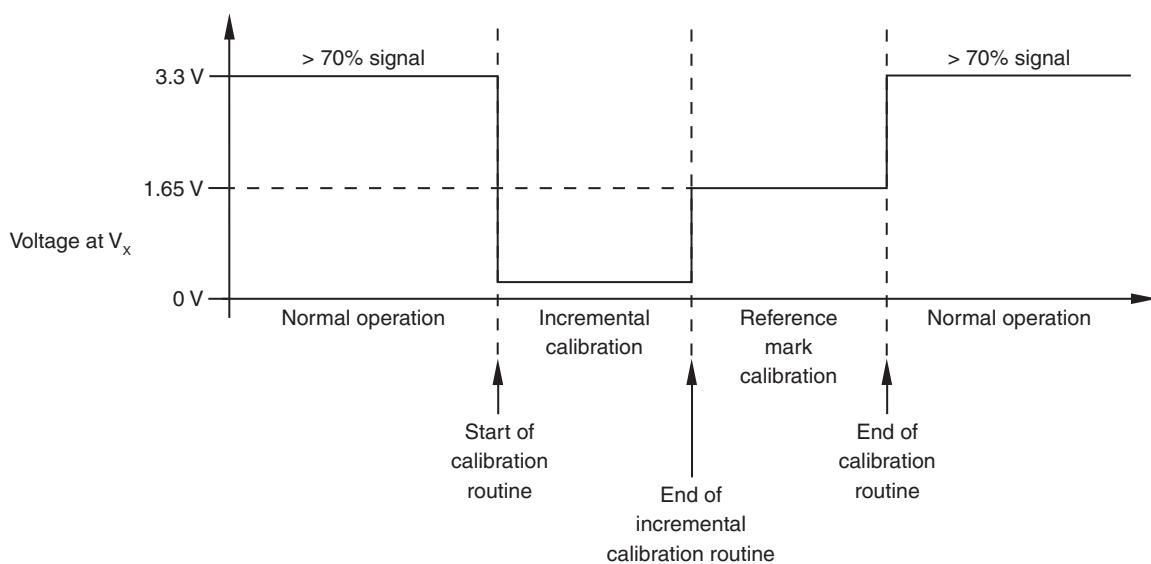

Between 50% and 70% signal level, V_x is a duty cycle.

Time spent at 3.3 V increases with incremental signal level.

At > 70% signal level V_x is nominal 3.3 V.

During CAL routine

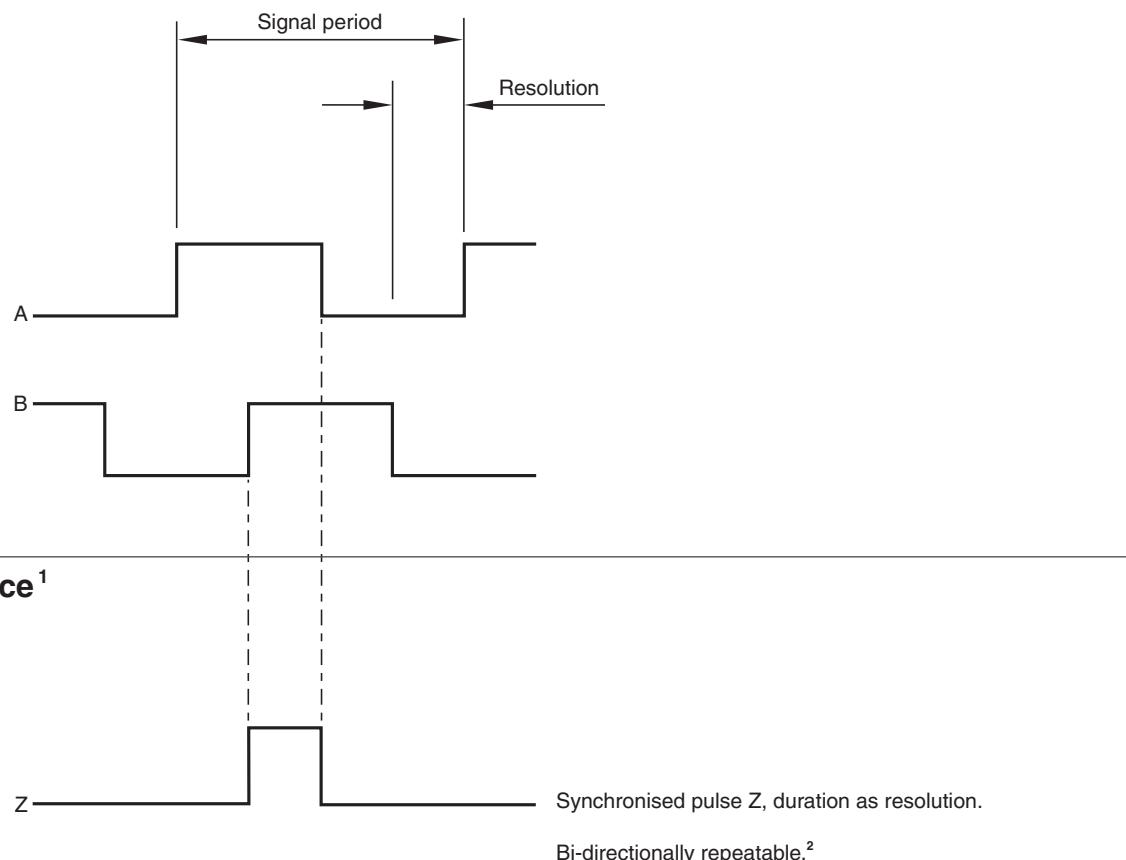

Digital output signals

Form - Square wave differential line driver to EIA RS422A

All ACi interfaces, Ri digital interfaces, and Ti digital interfaces

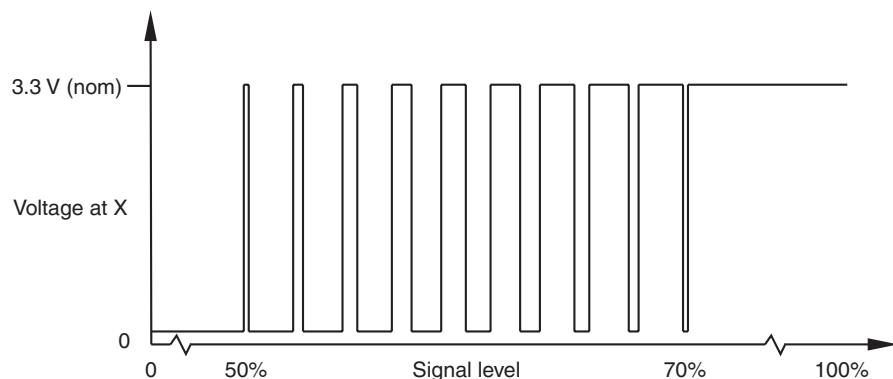

Incremental¹ 2 channels A and B in quadrature (90° phase shifted)

¹ Inverse signals not shown for clarity.

² Only calibrated reference mark is bi-directionally repeatable.

Set-up (ACi interfaces and Ri digital interfaces)

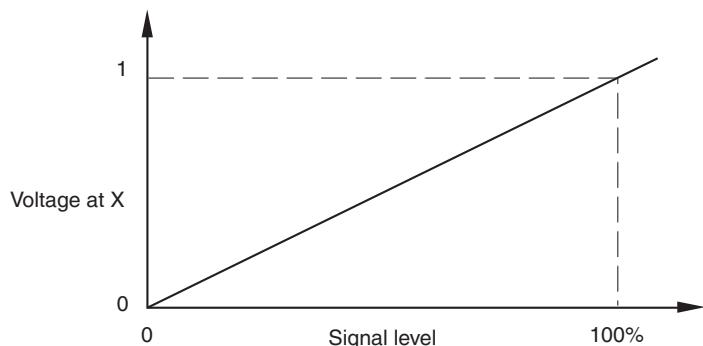

Between 50% and 70% signal level, X is a duty cycle.

Time spent at 3.3 V increases with incremental signal level.

At > 70% signal level X is nominal 3.3 V.

Set-up¹ (Ti digital interfaces only)

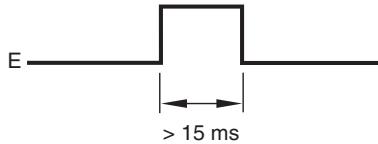

Set-up signal voltage proportional to incremental signal amplitude.

¹ Set-up signal as shown is not present during calibration routine.

Alarm¹

Differential line driven alarm output (Ri digital interfaces and Ti digital interfaces)

Interface model	Alarm asserted when
Ri0004	
Ri0008	• < 40% signal
Ri0020	• Overspeed
Ri0040	
Ri0100	• < 20% signal
Ri0200	• > 130% signal
Ri0400	

Interface model	Alarm asserted when
Ti	<ul style="list-style-type: none"> • < 20% signal • > 135% signal • Overspeed

3-state alarm output (ACi interfaces, Ri digital interfaces, and Ti digital interfaces)

Differentially transmitted signals forced open circuit for > 15 ms when alarm conditions valid.

¹ Inverse signals not shown for clarity.

ATOM readhead
